⑧

The top plate ② is connected with the side panel ① by using countersunk screw M6 x 25 ⑤

## Glue on enclosed felt:

Glue on enclosed felt as base for the spiker on the top plate.

The stability is heavily dependent on the nature and condition of the floor. Carpet floors can considerably reduce stability. The stability can be significantly improved by using the spikes supplied with the product. However, care is called for when fitting these, as there is a risk of injury from the sharp tips of the spikes and a possibility of damaging floor. Stands must under no circumstances be used as seats or climbing aids (ladder substitutes)
